

## Small Free and Useful

These Small Free and Useful programs are ones that we often use. We thought that since they are so small and we can't think of a lot more things to add to them that they definately arent worth making a full fledge program. That being said, If we see a large amount of interest and some ideas get tossed around we are definately willing to make it a full application and update it as needed.

Because these are not full programs, nothing is gauranteed to work, support will be limited, they may or may not come with an installer. Again, we use these prorgams a lot so they should be fine. Its not like anything bad would happen if they didnt work, they just wouldnt work.
